Preface	xv
List of Contributors	xix
Foreword	xxiii

Part I History

1.1 History of Cardiac Pacing	3
Earl Bakken: One Version of the First Pacemaker Story.....	3
The Long List of Inventions and Observations that Led to the Pacemaker.....	4
Pulse Theory and Observations that Bradycardia Leads to Syncope.....	4
Early Cardiac Pacing.....	5
Internal Pacemakers.....	6
Pacing for Nonsurgeons.....	7
Power Innovations.....	8
Programming.....	8
Dual-Chamber Pacing.....	9
Activity Rate Responders.....	10
Implantable Cardiac Defibrillators.....	10
Michel Mirowski.....	10
Conclusion.....	12
References.....	12
1.2 History of Defibrillation	15
Introduction: Defibrillation and Its Creators.....	15
Mysteries of Early Research: Abdilgaard's Chickens and Kite's Successes.....	17
Elucidating the Mechanism, Imagining the Cure.....	22
Defibrillation: From Russia and the Soviet Block.....	26
Defibrillation: AC to DC, in America and Beyond.....	30
Conclusion.....	35
References.....	38

1.3 Ventricular Fibrillation: A Historical Perspective	41
Introduction	41
Concepts, Instruments, and Institutions: Nineteenth-Century Legacy	42
The Clinic and the Laboratory	44
Ventricular Fibrillation: Experimental Evidence and Basic Concepts, 1880s–1920s	47
From Wiggers to Moe: The Multiple Wavelet Hypothesis	52
Modern Concepts of Ventricular Fibrillation	53
Concluding Remarks	54
References and Notes	54

Part II Theory of Electric Stimulation and Defibrillation

2.1 The Bidomain Theory of Pacing	63
Introduction	63
Unipolar Stimulation	63
Make and Break Excitation	64
Strength-Interval Curves	71
No-Response Phenomenon	76
Effect of Potassium on Pacing	78
Time Dependence of the Anodal and Cathodal Refractory Periods	79
Conclusion	81
Acknowledgments	81
References	81
2.2 Bidomain Model of Defibrillation	85
Introduction	85
Advancements Leading to the Development of the Bidomain Model of Defibrillation	86
Bidomain Equations and Numerical Approaches for Large-Scale Simulations in Shock-Induced Arrhythmogenesis and Defibrillation	87
Governing Equations	88
Computational Considerations	89
Numerical Schemes	90
Linear Solvers	91
Models of the Heart in Vulnerability and Defibrillation Studies	94
Description of Myocardial Geometry and Fiber Architecture	94
Representation of Ionic Currents and Membrane Electroporation	95
Shock Electrodes and Waveforms	95
Arrhythmia Induction with an Electric Shock and Defibrillation	96

Postshock Activity in the Ventricles.....	97
VEP Induced by the Shock in the 3D Volume of the Ventricles.....	97
Postshock Activations in the 3D Volume of the Ventricles.....	99
ULV and LLV.....	100
Shock-Induced Phase Singularities and Filaments.....	102
Induction of Arrhythmia with Biphasic Shocks.....	102
Conclusion.....	104
Acknowledgments.....	105
References.....	105
2.3 The Generalized Activating Function	111
Introduction.....	111
The Activating Function.....	112
The Generalized Activating Function.....	114
Examples.....	116
Discussion.....	124
Limitations.....	125
Validation.....	126
Conclusion.....	126
Appendix.....	126
References.....	130
2.4 Theory of Electroporation	133
Concept of Electroporation.....	133
Physical Background of Electroporation.....	134
Pore Energy.....	134
Pore Creation.....	136
Pore Evolution.....	137
Postshock Pore Shrinkage and Coarsening.....	138
Pore Resealing.....	139
Mathematical Modeling of Electroporation.....	140
Advection-Diffusion Equation.....	140
Asymptotic Model of Electroporation.....	141
Current–Voltage Relationship of a Pore.....	142
Example of the Electroporation Process.....	144
Governing Equation for the Transmembrane Potential.....	144
Membrane Charging Phase.....	145
Pore Creation Phase.....	145
Pore Evolution Phase.....	146
Postshock Pore Shrinkage Phase.....	148
Pore Resealing Phase.....	149
Effects of Shock Strength.....	149
Limitations.....	151

Conclusion.....	153
Acknowledgment.....	153
Appendix 1: Parameters of the Electroporation Model.....	154
Appendix 2: Numerical Implementation.....	155
References.....	156

Part III Electrode Mapping of Defibrillation

3.1 Critical Points and the Upper Limit of Vulnerability for Defibrillation	165
Introduction.....	165
Mechanisms by which Shocks Induce VF.....	167
The Field-Recovery Critical Point.....	169
Inconsistencies with the Field-Recovery Critical Hypothesis for Defibrillation.....	180
The Virtual Electrode Critical Point.....	182
Other Possible Mechanisms for Defibrillation.....	185
Acknowledgment.....	185
References.....	185
3.2 The Role of Shock-Induced Nonregenerative Depolarizations	189
Brief Historical Perspectives.....	189
The Era of Computerized Cardiac Mapping: New Insights.....	194
Initiation of VF by Electrical Stimuli.....	195
Different Proposed Hypotheses of Defibrillation.....	196
The Graded Response Hypothesis of Fibrillation and Defibrillation.....	199
Graded Response Characteristics.....	199
Conclusions and Future Directions.....	211
Acknowledgment.....	212
References.....	212

Part IV Optical Mapping of Stimulation and Defibrillation

4.1 Mechanisms of Isolated Cell Stimulation	221
Introduction.....	221
Transmembrane Potential (V_m) Responses of an Isolated Cell.....	222
Theoretical Framework of Field Stimulation.....	222
Experimental Responses During Field Stimulation.....	225
Single Cells Versus Tissue Responses: Similarities and Differences.....	236
Field-Induced Responses of an Isolated Cell-Pair: Sawtooth Effect.....	237
Theoretical Treatment of Sawtooth Effect.....	238
Experimental Measurement of Sawtooth Effect.....	239
Sawtooth Effect's Role in Tissue: "Fact or Fantasy".....	241

Effect of Electric Fields on Intracellular Calcium.....	243
Measurement of Intracellular Ca^{2+} Transients Using Fluorescent Probes.....	244
Effect of Field Stimulation on Intracellular Ca^{2+} Transients at Rest.....	244
Effect of Field Stimulation on Intracellular Ca^{2+} Transients During Plateau.....	248
Implications of Field-Induced Ca^{2+} Gradients.....	248
Conclusion.....	249
References.....	249
4.2 The Role of Microscopic Tissue Structure in Defibrillation	255
Introduction.....	255
Possible Mechanisms of Intramural Shock-Induced V_m Changes.....	256
The Role of Microscopic Tissue Structure in the Shock Effects: Experiments in Cell Cultures.....	258
The Role of Cell Boundaries in Shock Effects.....	259
The Role of Intercellular Clefts in the Shock Effects.....	261
Shock-Induced ΔV_m in Cell Strands.....	263
Measurements of Intramural Shock-Induced ΔV_m in Wedge Preparations.....	270
Comparison between Microscopic and Macroscopic ΔV_m Measurements.....	275
Conclusion.....	277
References.....	277
4.3 Virtual Electrode Theory of Pacing	283
Introduction.....	283
Virtual Electrodes during Unipolar Stimulation of Cardiac Tissue.....	284
Anode and Cathode Make and Break Excitation.....	290
Strength–Interval Curves.....	293
Quatrefoil Reentry.....	296
Defibrillation.....	301
The No-Response Phenomenon and the Upper Limit of Vulnerability.....	306
Influence of Physical Electrodes During a Shock.....	306
The Effect of Fiber Curvature on Stimulation of Cardiac Tissue.....	307
Heterogeneities.....	310
Averaging over Depth During Optical Mapping.....	311
Boundary Conditions and the Bidomain Model.....	312
The Magnetic Field Produced by Cardiac Tissue.....	313
Conclusion.....	315
Acknowledgments.....	316
References.....	317

4.4 The Virtual Electrode Hypothesis of Defibrillation	331
Introduction.....	331
Historical Overview of Defibrillation Therapy.....	331
Bidomain Model.....	332
Fluorescent Optical Mapping.....	333
Virtual Electrodes and the Activating Function.....	334
Mechanisms of Defibrillation.....	335
Theories of Defibrillation.....	335
Virtual Electrode Hypothesis of Defibrillation: The Role of Deexcitation and Reexcitation.....	336
Virtual Electrode-Induced Phase Singularity Mechanism.....	337
Chirality of Shock-Induced Reentry Predicted by VEP Not the Repolarization Gradient.....	340
Shock-Induced VEP as a Mechanism for Defibrillation Failure.....	343
The Role of Electroporation.....	344
Clinical Implications of the Virtual Electrode Hypothesis of Defibrillation.....	344
The Role of Virtual Electrodes and Shock Polarity.....	344
Waveform Optimization.....	345
Toward Low-Energy Defibrillation.....	347
Conclusion.....	351
References.....	351
4.5 Simultaneous Optical and Electrical Recordings	357
Introduction to Electrooptical Measurements.....	357
ITO Properties.....	358
Ratiometric Optical Mapping.....	359
Role of the Second Spatial Derivative of the Extracellular Potential in Field Stimulation.....	360
Stimulatory Effects of a Spatial Variation of Extracellular Conductance in an Electric Field.....	364
Effect of Unipolar Stimulation in the Tissue under the Electrode.....	365
Electrooptical Mapping of Cardiac Excitation.....	368
Method of Electrooptical Mapping.....	369
Electrooptical Mapping of Epicardially Paced Beats and Sinus Beats.....	370
Electrooptical Mapping of Fibrillation.....	375
Conclusion.....	378
References.....	378
4.6 Optical Mapping of Multisite Ventricular Fibrillation Synchronization	381
Pacing to Terminate Ventricular Fibrillation.....	382
New Opportunities in Improving Ventricular Defibrillation.....	382
Optical Mapping of Multisite Synchronization of Ventricular Fibrillation.....	383
Optical Recording-Guided Pacing to Create Functional Block during VF.....	387

Improvement of Defibrillation Efficacy with Synchronized Multisite Pacing.....	389
Conclusion.....	393
References.....	393

Part V Methodology

5.1 The Bidomain Model of Cardiac Tissue: From Microscale to Macroscale	401
Introduction.....	401
Microscopic Modeling Cardiac Tissue.....	403
Macroscopic Modeling Cardiac Tissue.....	404
Homogenization.....	406
Bidomain Model of Cardiac Tissue.....	410
Bidomain Properties at the Tissue Level.....	411
Bidomain Properties at the Heart Level.....	416
Conclusion.....	417
References.....	418
5.2 Multielectrode Mapping of the Heart	423
Introduction.....	423
Methods.....	424
Determining Activation Time.....	425
Generating Contours.....	432
Conclusion.....	437
References.....	438
5.3 The Role of Electroporation	441
Role of Electroporation in Defibrillation.....	441
Contribution of Electroporation to Optically Recorded Cellular Responses.....	446
Electroporation Assessment by Membrane Impermeable Dye Diffusion.....	448
Role of Electroporation in Pacing.....	451
Irreversible Electroporation in Cardiac Surgery.....	451
Conclusion.....	451
References.....	452

Part VI Implications for Implantable Devices

6.1 Lessons for the Clinical Implant	459
Electrical Parameters of Defibrillation Waveforms.....	459
Parameters that Influence Defibrillation.....	459
Parameters that Influence ICD Design.....	459
Principles of Capacitive Discharge Waveforms.....	461

Truncation.....	461
Stored Versus Delivered Energy.....	463
Optimizing Waveforms with the RC Network Model.....	464
Minimizing Shock Energy Without Electronic Constraints.....	465
The Predicted Optimal Monophasic Shock.....	465
The Predicted Optimal Biphasic Shock.....	468
Optimizing Capacitive Discharge Waveforms.....	468
Optimizing Duration: Monophasic Shock and First Phase of Biphasic Shock with a Fixed Capacitance.....	468
Optimizing Capacitance.....	471
Optimizing Phase Two of the Biphasic Waveform.....	472
Truncation by Duration Versus Truncation by Tilt.....	473
Waveform Polarity.....	478
Waveforms in Commercially Available ICDs.....	480
Other Considerations in Optimizing Waveforms.....	483
The Misunderstood Superior Vena Cava Coil.....	484
Conclusion.....	485
References.....	486
6.2 Resonance and Feedback Strategies for Low-Voltage Defibrillation	493
Introduction.....	493
Localized Stimulation: Induced Drift of Spiral Waves.....	493
Delocalized Stimulation: Resonant Drift of Spiral Waves.....	495
Feedback-Controlled Resonant Drift.....	498
Three-Dimensional Aspects.....	501
Pinning and Unpinning.....	502
“Black-Box” Approaches.....	507
Conclusion.....	507
Acknowledgments.....	508
References.....	508
6.3 Pacing Control of Local Cardiac Dynamics	511
Introduction.....	511
Chaos Control.....	511
Alternans Control.....	515
APD Alternans.....	515
Conduction Velocity Alternans.....	520
References.....	521
6.4 Advanced Methods for Assessing the Stability and Control of Alternans	525
Introduction.....	525
What Is an Eigenmode?.....	528

Characterization and Control of Alternans in Isolated Cardiac Myocytes.....	531
Application of the Eigenmode Method.....	531
The Ion Channel Mechanism Underlying Alternans.....	534
Development and Testing of a Control Algorithm.....	537
Characterization and Control of Spiral Wave Instabilities.....	540
Nature of Spiral Wave Instabilities.....	540
Elimination of Alternans in a Rotating Spiral Wave.....	542
Summary and Implications for Treatment of Cardiac Arrhythmias.....	543
Appendix: Mathematical Details.....	544
References.....	547
6.5 The Future of the Implantable Defibrillator	551
Sensing and Detection.....	551
Reduction of Ventricular Oversensing.....	551
Active SVT-VT Discrimination.....	552
Hemodynamic Sensors for ICDs.....	552
Implant Testing.....	553
Vulnerability Testing.....	555
State of the Art.....	557
After the Implant.....	559
Novel Waveform Strategies.....	559
Defibrillation Threshold Reduction.....	559
Cardioversion Pain Reduction.....	561
Medium Voltage Therapy.....	562
Novel Packaging Strategies.....	562
Subcutaneous ICDs.....	562
Percutaneous, Fully Transvenous ICD.....	563
Conclusion.....	563
References.....	563
6.6 Lessons Learned from Implantable Cardioverter-Defibrillators	
Recordings	571
Introduction.....	571
ICD Electrograms.....	572
Interpretation of ICD Recordings.....	573
Lessons Learned from ICD Treatment of Ventricular Tachyarrhythmias.....	575
Incidence of Ventricular Tachyarrhythmias.....	575
Therapy Efficacy and Failure Modes.....	578
Therapy Efficacy: Defibrillation.....	579
Therapy Efficacy: Cardioversion.....	581
Therapy Efficacy: Antitachycardia Pacing.....	583
Investigating the Causes of Tachyarrhythmia.....	586

Lessons Learned from Inappropriately Treated ICD Episodes.....591
 Inappropriate Detection Due to Oversensing.....591
 Inappropriate Detection and Therapy Due to Nonsustained VT/VF.....593
 Inappropriate Detection Due to Supraventricular Tachycardia.....593
 Inappropriate ICD Therapies and Changing Patient Population.....597
Lessons Learned from Appropriately Treated AT/AF Episodes.....597
 Atrial Tachyarrhythmia Detection and Termination Accuracy.....597
 Efficacy of Device-Based Therapies for AT/AF.....600
 AT/AF Therapy Efficacy: Impact of Early Recurrence of Atrial Fibrillation.....600
 Atrial ATP Therapy Efficacy.....600
 Atrial Defibrillation Shock Efficacy.....603
Conclusion.....604
References.....604

Cardiac Bioelectric Therapy

Mechanisms and Practical Implications

(Eds.) I.R. Efimov, M.W. Kroll; P.J. Tchou

2009, Approx. 725 p. 327 illus., 62 in color., Hardcover

ISBN: 978-0-387-79402-0
